

Low-Dimensional Molecular Coordinates Reveal Spatiotemporal Dynamics of Wound Repair

150 RNA-seq profiles • 6 Pigs • 15 Time points • Days 0-21 • 2,000 Highly variable genes

Zlobina et al., *Scientific Data* (2025), Fig. 2. [doi:10.1038/s41597-025-05921-w](https://doi.org/10.1038/s41597-025-05921-w) · CC BY 4.0

Non-negative Matrix Factorization (NMF) compresses 2,000 genes into seven coordinated programs

Repair-associated programs show distinct temporal and spatial patterns

Individual-pig NMF program trajectories

Not shown: muscle, adipose, and skin-appendage programs

Low-dimensional molecular programs reveal distinct wound-edge and wound-center healing trajectories
